Abstract: The main purpose of this study is to determine the impact of environmental consciousness on practices and values in sanitation, health and hygiene among Grade VI pupils of Delfin Albano District, Division of Isabela, for the school year 1995-1996.

This study is basically a descriptive research which employed a teacher-made test designed to gather information about present conditions on the impact of environmental consciousness’ on practices and values in sanitation, health and hygiene among Grade VI pupils in terms of knowledge, attitudes, practices, and values.

The primary source of data was the results of the written test of the Grade VI pupils of Delfin Albano District of the Division of Isabela. The main instrument in gathering data was the teacher-made test.

Both descriptive statistics like weighted mean, standard deviation, mean percentage score, and Pearson r, and inferential statistics like analysis of variance (ANOVA), t-test of relationship were in interpreting the data summarized.
